

CONVERTERS

by Fabiano Maresca

A.N.G. USA is specialized in the production and sales of frequency converters to enable yachts to link up to any shore power dispenser in any port anywhere notwithstanding different frequencies and Volts supplied.

A.N.G. converters are compatible from 40 through to 440 Hz and transform these into what is usually used on board which ranges from 50 to 60 Hz and as the converters are universal they accept single phase as well as three phase electrical current and deliver required outputs. This US Company albeit a new brand in the yachting world, called for advice from precious contributors operating in European naval sectors, railways and electromechanical fields too. All of the company's products result from in depth tests carried out in demanding, even extreme conditions. All converters have been designed for heavy duty work they're rugged and well equipped with galvanic isolation transformers, marine plugs and flush mounted sockets compliant to IP 67 standards. They're assembled with the best available parts on the market while adopting simple

reliable technology.

In addition to producing and commercialising frequency converters A.N.G. also offers to adapt yachts to US or European standards by converting electrical appliances on board, sockets, audio-visual plants and more. Additionally when temporary conversions are requested and not permanent ones, A.N.G. Converters can rent out devices on board and/or on the quay. A.N.G. Converters are available everywhere in the US and in most European Countries but the network can reach and go anywhere if and when need be to replace parts while the company's technical staff is on call to supply any technical support 24/7.
